

Hysterical Cure

by Bob Boucher, May 2011

A cure for Female Hysteria found!
T'was done at Berkeley, the science is sound.
He used one thousand Co-Eds in his trial,
the doctor explained, with a winning smile.

Each Co-Ed had sex, quite unprotected
and the results were not unexpected.
Within two hours, her hormones were peaking
estrogen for the relief she was seeking.

Semen, semen is all that was needed,
sperm not needed, just semen unseeded.
Men with vasectomies also will do.
Now, girls feeling blue, you know what to do.
